## a ROOM SERVER OUTPUTS

Room added successfully without any error.

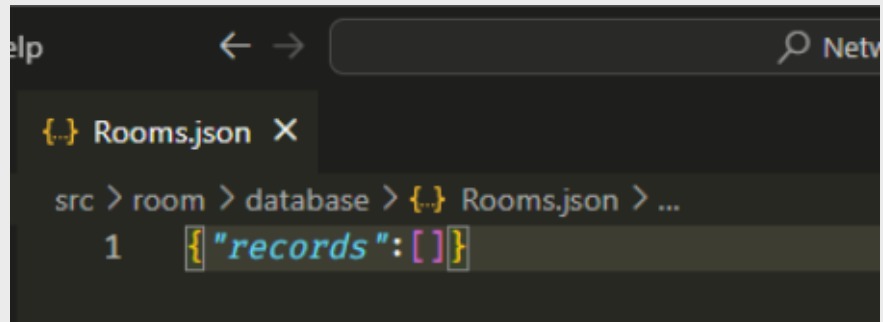

Records are stored in a json file after a room is added.

```
{-} Rooms.json X
src > room > database > {-} Rooms.json > [ ] records
1  {
2    "records": [
3      {
4        "name": "z06",
5        "day_1": {
6          "9": null,
7          "10": null,
8          "11": null,
9          "12": null,
10         "13": null,
11         "14": null,
12         "15": null,
13         "16": null,
14         "17": null
15       },
16       "day_2": {
17         "9": null,
18         "10": null,
19         "11": null,
20         "12": null,
21         "13": null,
22         "14": null
```

Room removed successfully without any error.

Changed records are stored in a json file after a room is removed.

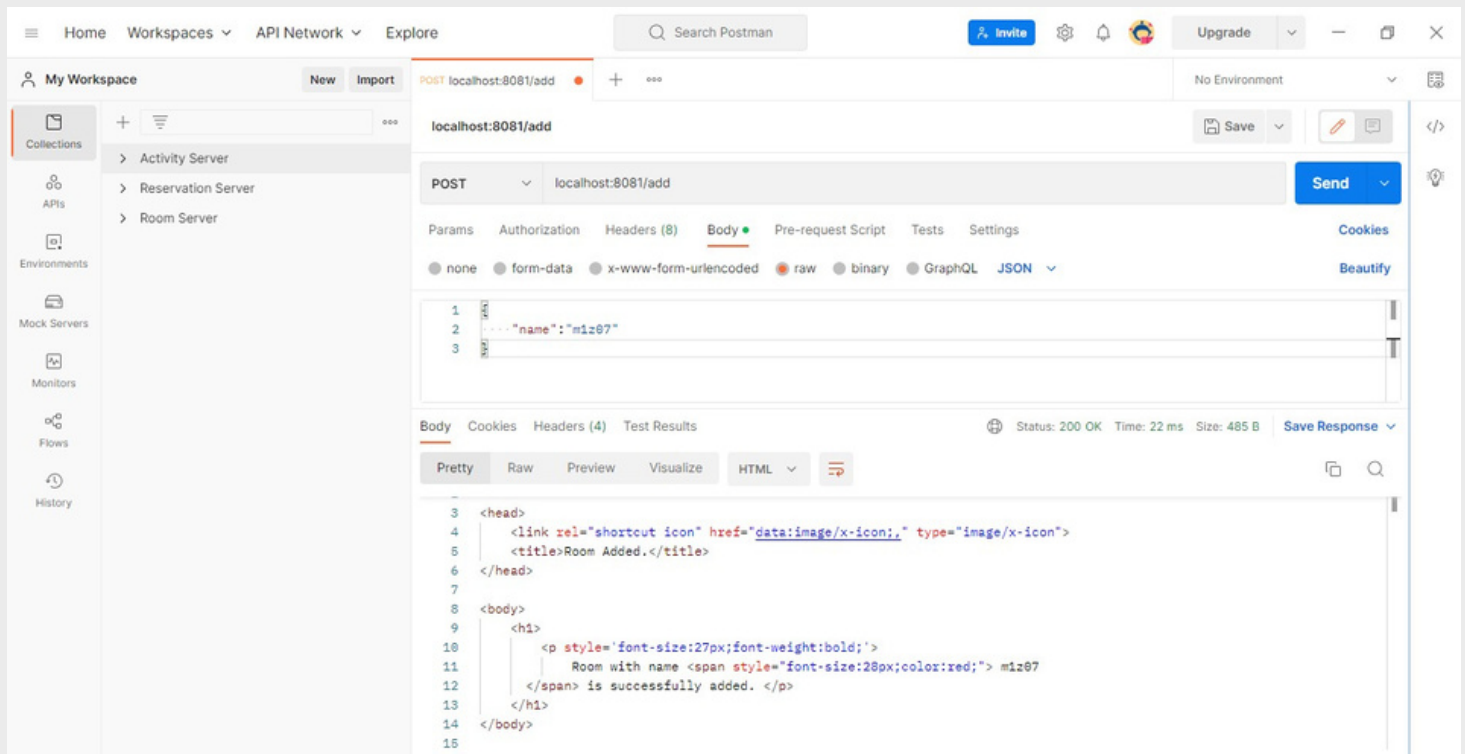

After each reservation process, available hours for the room is listed.

After each reservation process, reserved hours for the room is listed.

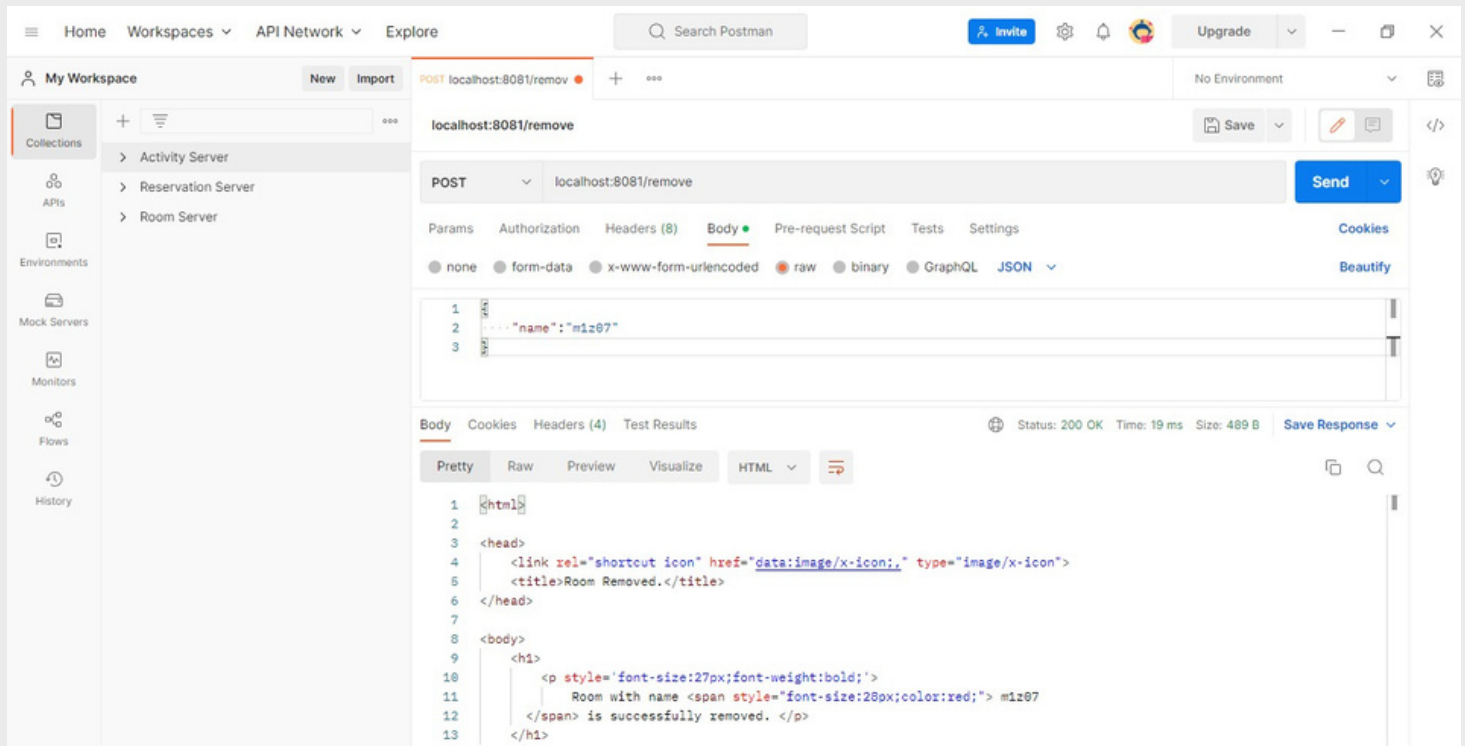

# Postman was used for sending post requests

Room “m1z07” added successfully without any error.

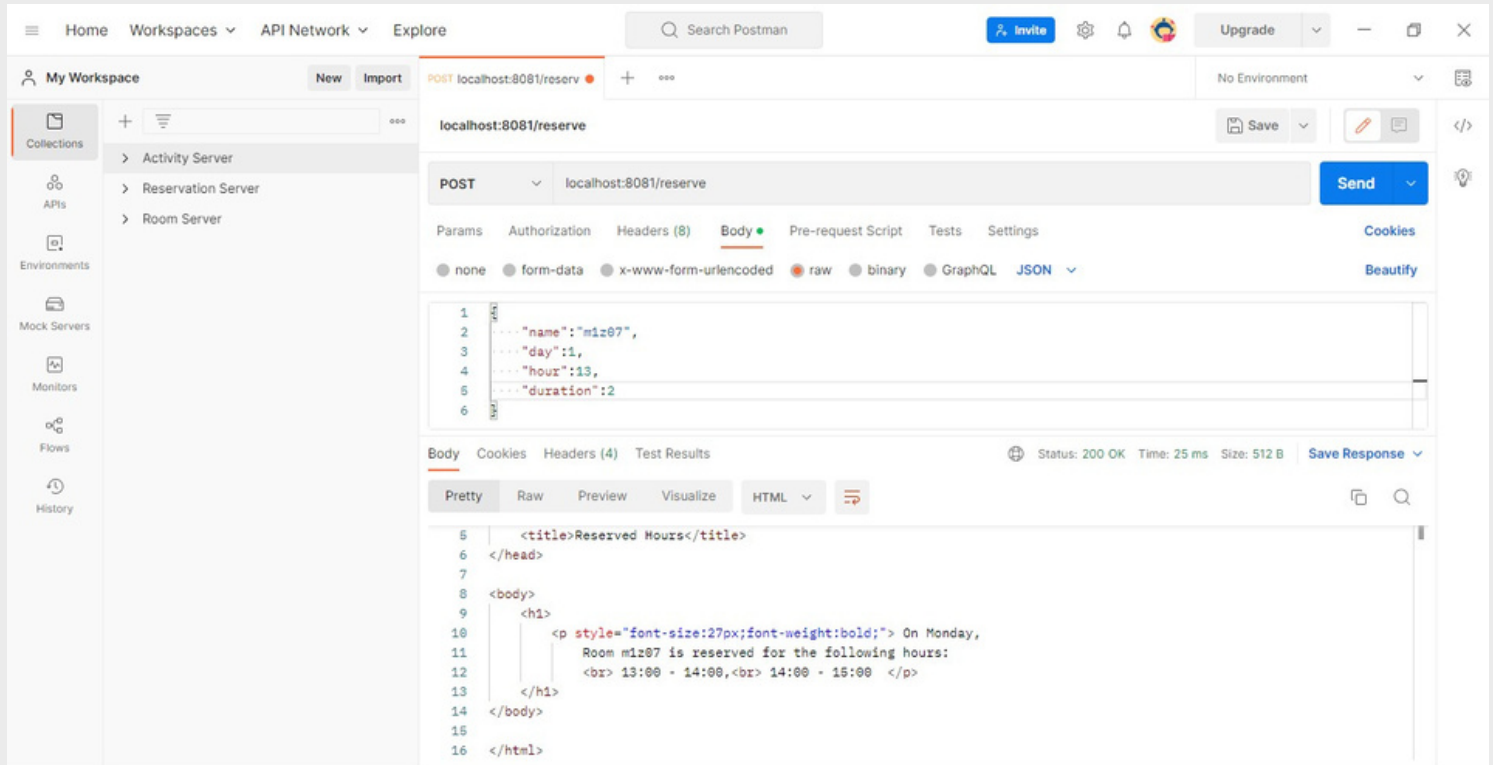

Room “m1z07” removed successfully without any error.

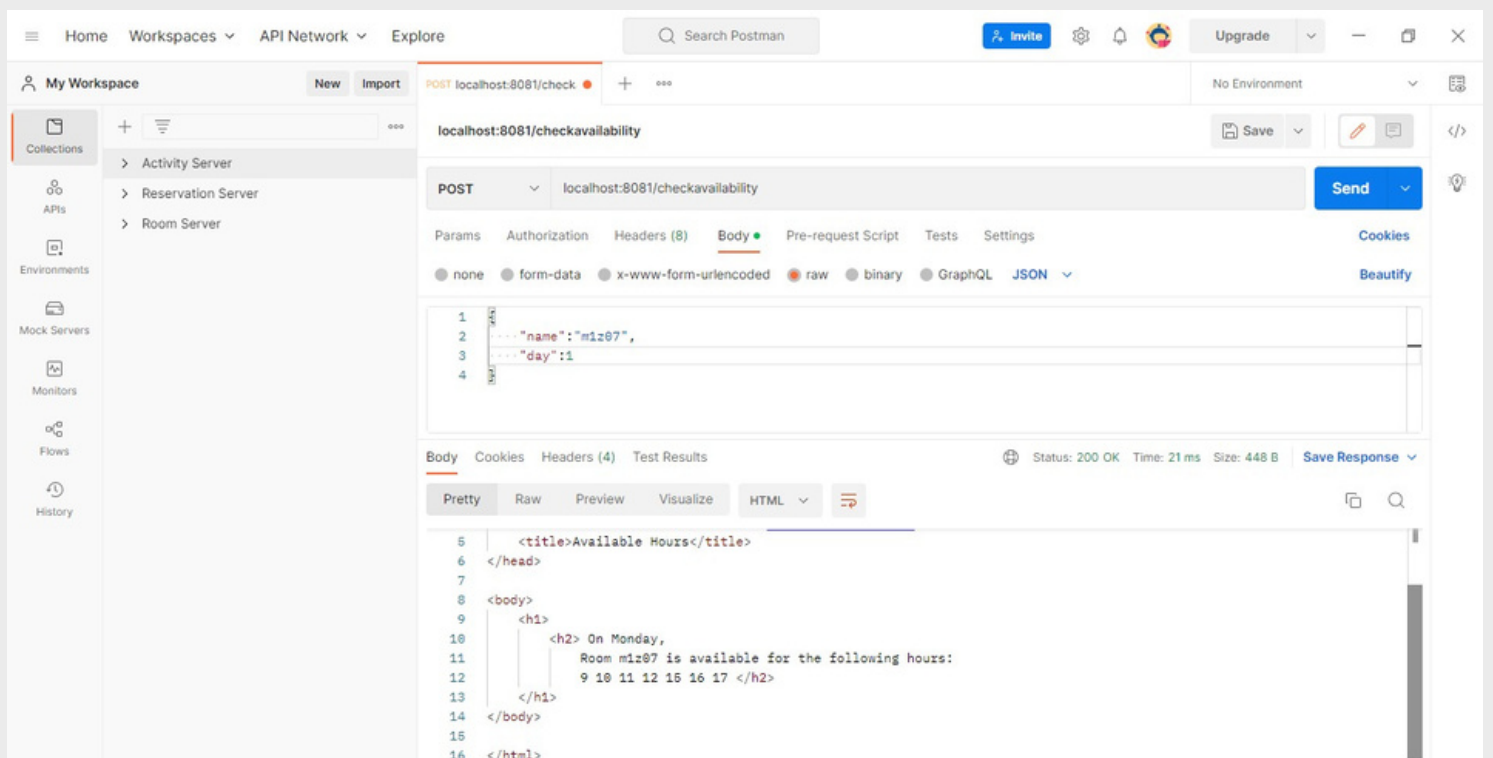

# Postman was used for sending post requests

Room “m1z07” reserved on Monday between 13:00-15:00 successfully without any error.

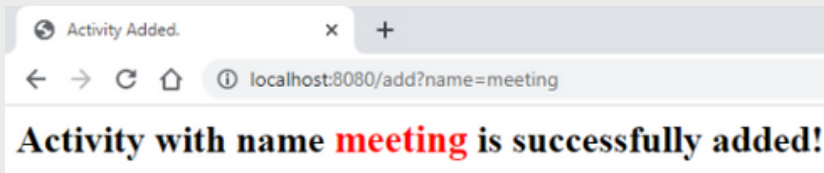

Fetches available hours of the “m1z07” room on Monday.

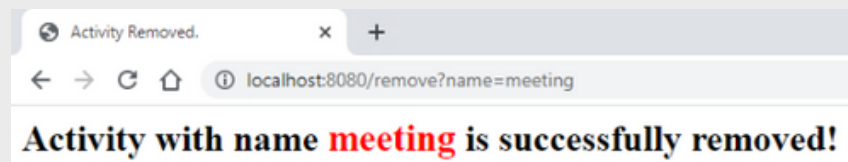

## b ACTIVITY SERVER OUTPUTS

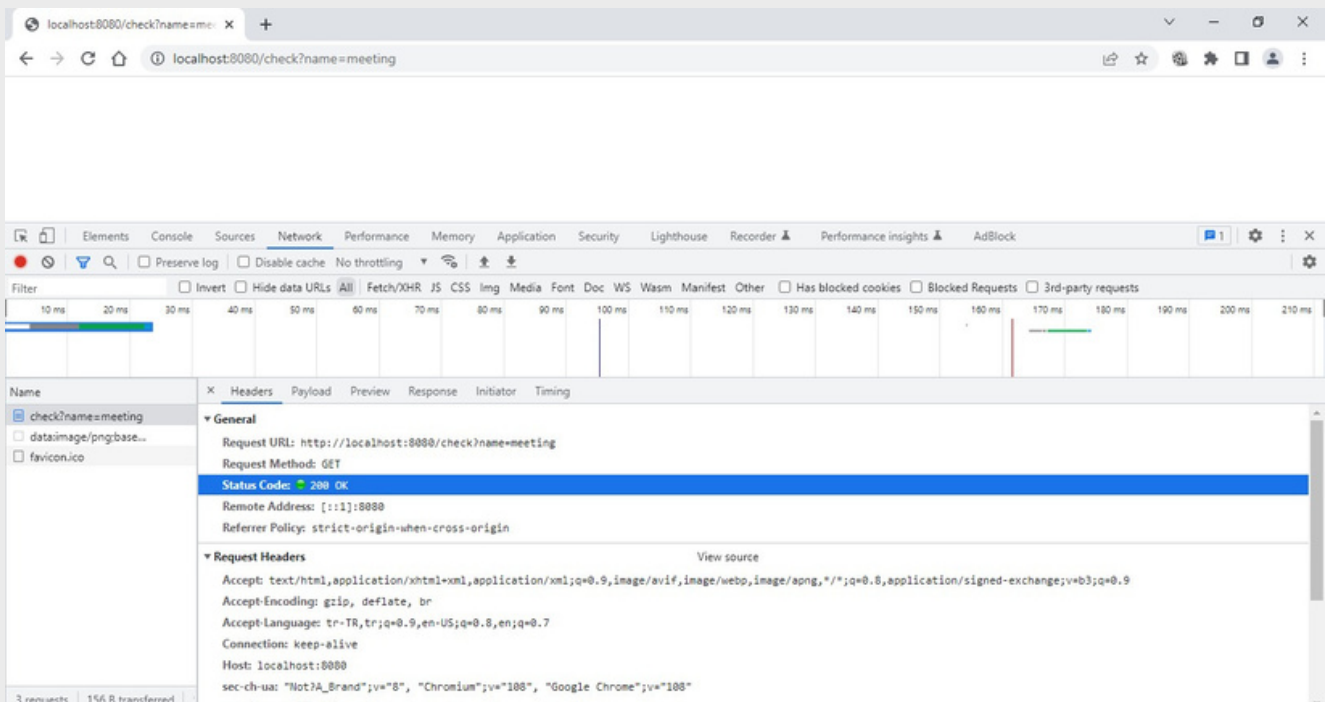

Activity added succesfully without any error.

Activity removed succesfully without any error.

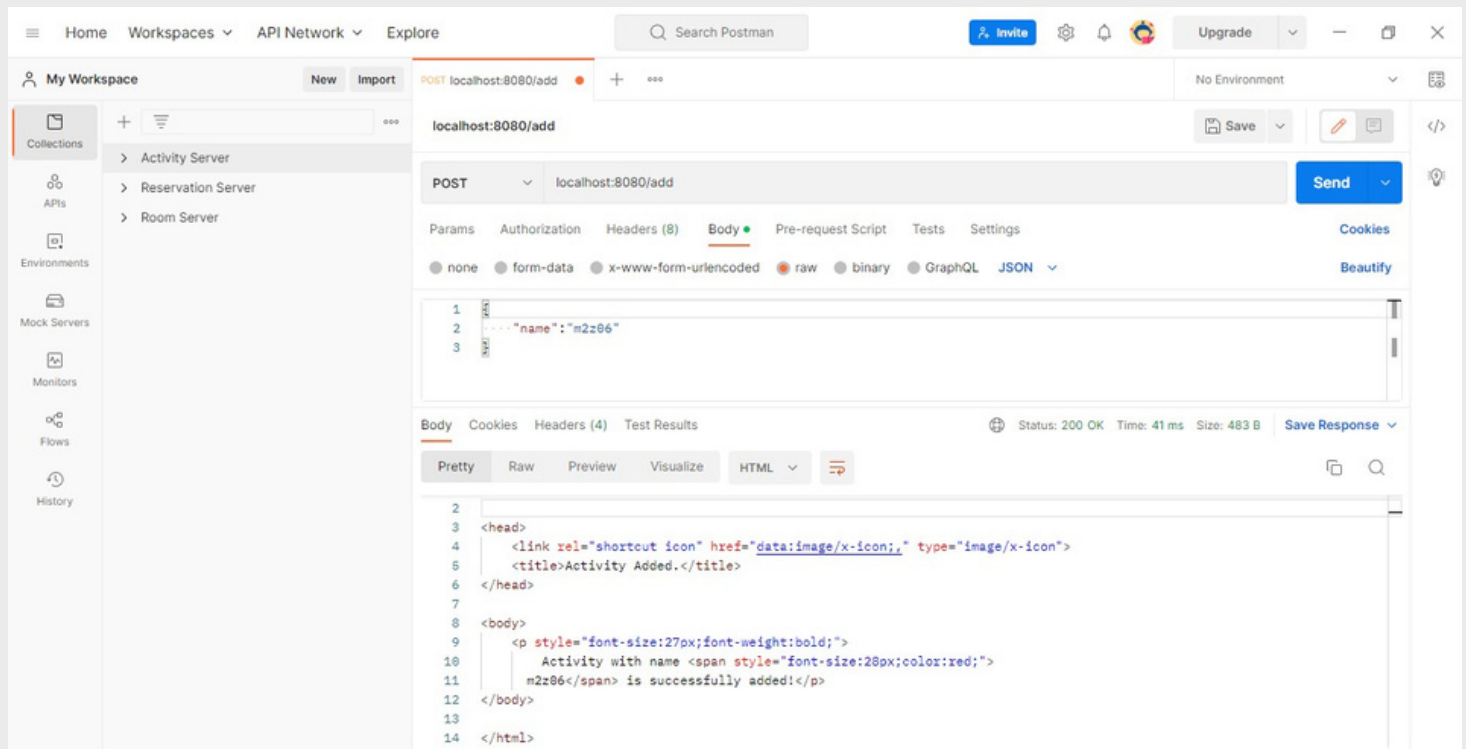

Checking whether an activity exists or not using activity name.

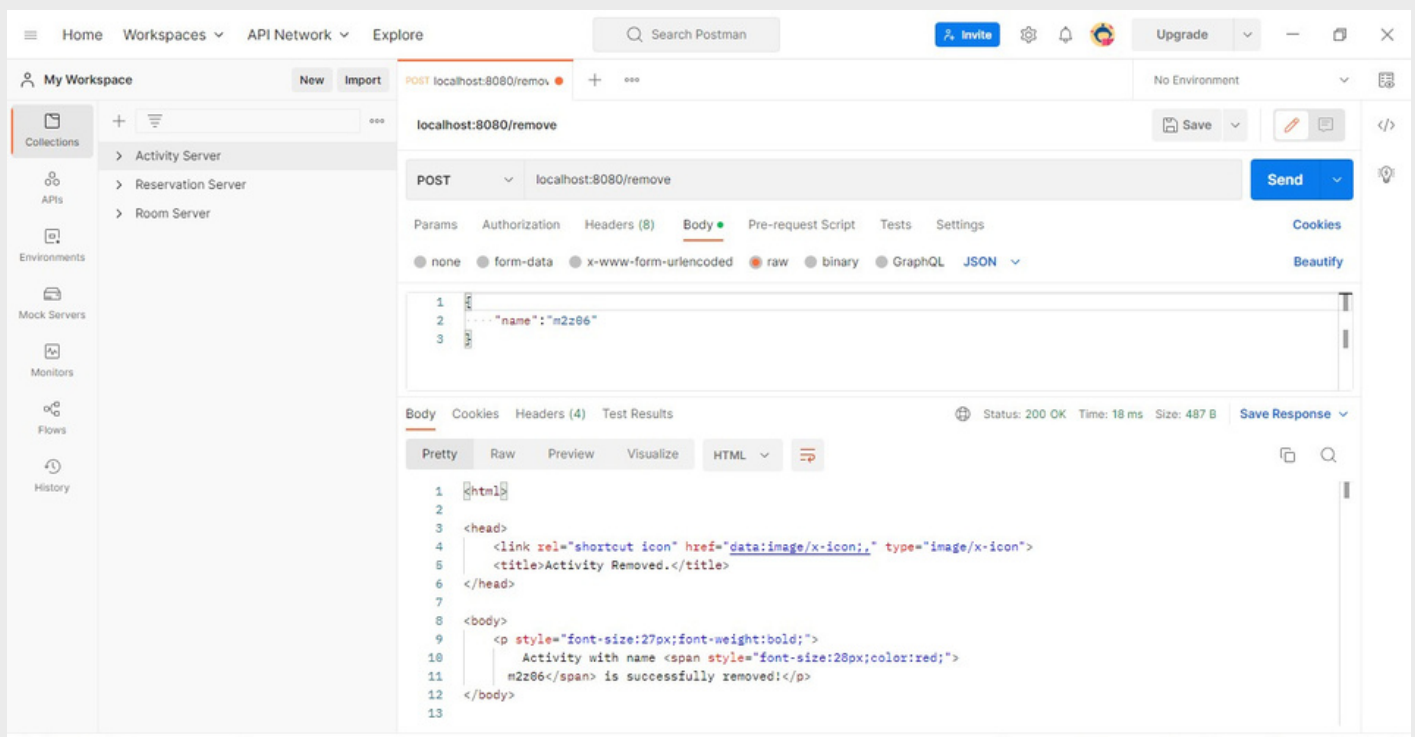

# Postman was used for sending post requests

Activity added successfully without any error.

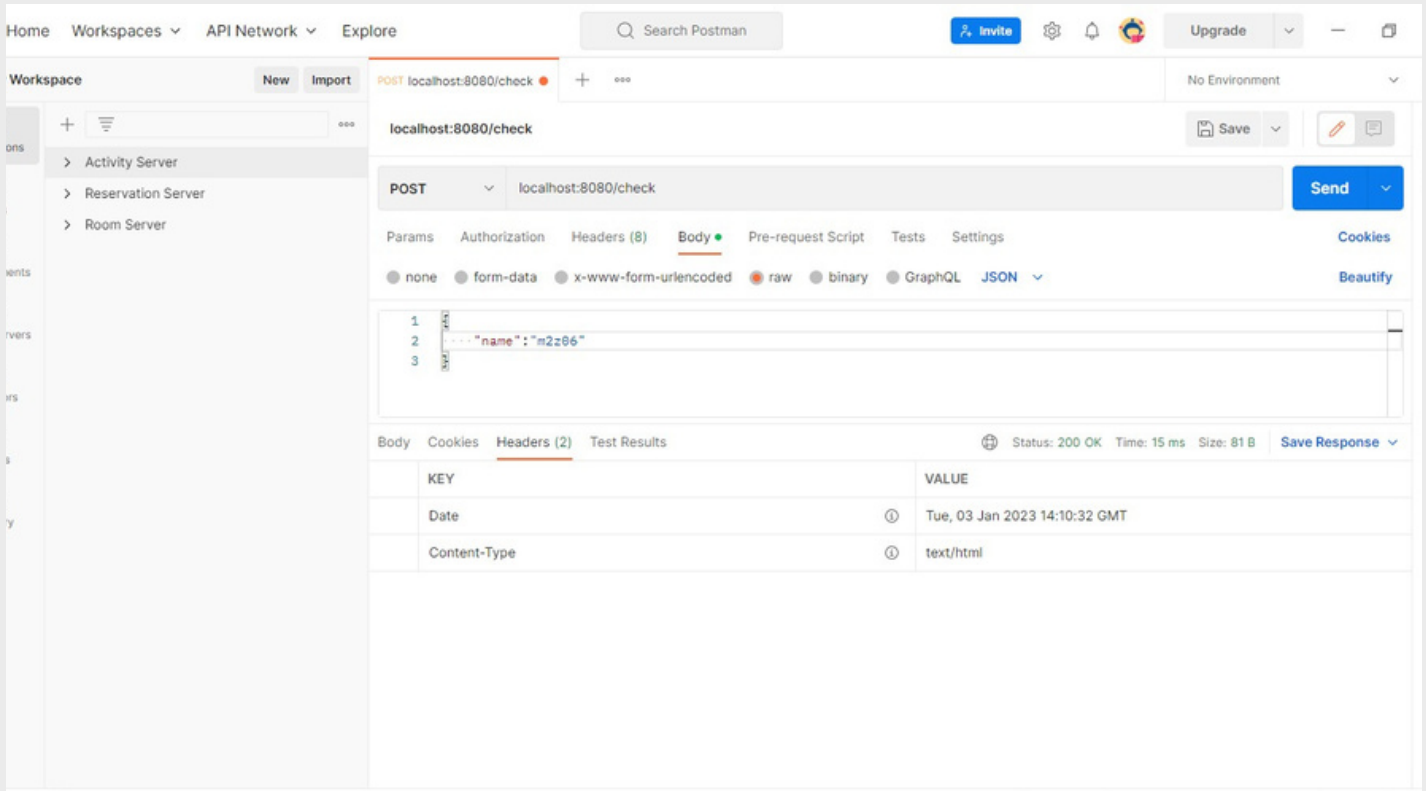

Activity removed successfully without any error.

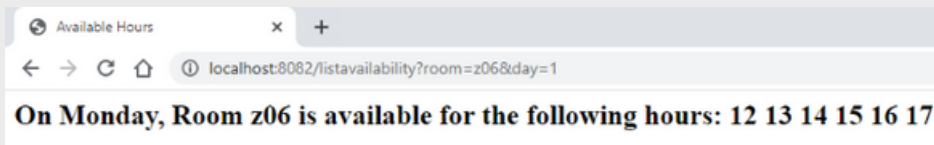

# Postman was used for sending post requests

Checking whether an activity exists or not using activity name.
